AGS Complex Machine Studies (AGS Studies Report No. 320) Daily Log Summary for Proton Run from March to July, 1994
Study Period: March - July, 1994
Participants: Main Control Room Staff
Principals: K. Zeno and B. Tamminga
Reported by: E. Bleser
Machine: AGS Proton Complex
Aim: To make a daily record of the machine performance.

Summary

Each morning, the Main Control Room staff records the "morning numbers" describing the performance of the beam. This note presents without comment 36 graphs displaying the data accumulated during the last three months of the 1994 proton run. (Comment is plainly called for and will be forthcoming.) This data is available for anyone to analyze. Subsequent notes will deal with establishing limits for the parameters for the 1995 run and with extracting some physics from this data.

Files

The data is entered into a LOTUS worksheet. The backup of the original worksheet is stored under the name DAILYLOG.WK3 in the root directory of the PC in the center of the Control Room. For this report, this file was rearranged, some obvious errors were corrected and the appended graphs were prepared. The resulting file is stored under the name DL94.WK3 in the root directory of the Control Room PC. People working with the data should use a copy of this file. For the 1995 run, we have prepared a file, DL95.WK3, similar to DL94.WK3. As the data is entered each morning into DL95.WK3, graphs similar to those in this report will be generated automatically.
